FUEL PRO 485

APPLICATIONS

- Engine models
  - Detroit DD13, DD15, DD16
  - Cummins X15
  - New Cascadia
- Meets/Exceeds engine manufacturers’ stringent water separation requirements

ELIMINATE UNNECESSARY CHANGES & MAINTENANCE

- All-in-one fuel filter, water separator, and fuel heater for heavy duty applications
- Clear cover provides instant visual indication of filter life
- "SEEING IS BELIEVING"® See when NOT to change the filter
- Extended filter change intervals with patented EleMax® Technology
- Enhanced fuel system troubleshooting procedures
- Environmentally friendly filter changes
- Biodiesel compatible to B20

5 MINUTE FILTER CHANGES

- Environmentally friendly, dry filter changes – Drain fuel below collar and replace
- No fuel spills – Removing standard filters full of fuel can be messy and hazardous
- Check valve eliminates drain back during filter changes
- High flow drain
- Simple priming for easier starts

OPTIONS

- Electric Heaters
  - 12VDC Pre-heater
  - 120VAC Overnight Heater
- Water-In-Fuel (WIF) Sensor (standard when used with Cummins X15 Engines)

FILTER ELEMENT
Patented design for extended life and maximum filtration performance

SELF-PRIMING PORT
Remove the cap, pour in fuel and restart the engine with clean "filtered" fuel

CLEAR COVER
See when NOT to change the filter

LIGHTWEIGHT ALUMINUM CONSTRUCTION

DRAIN VALVE

OPTIONS

- Electric Heaters
  - 12VDC Pre-heater
  - 120VAC Overnight Heater
- Water-In-Fuel (WIF) Sensor (standard when used with Cummins X15 Engines)

FILTER ELEMENT
Patented design for extended life and maximum filtration performance

SELF-PRIMING PORT
Remove the cap, pour in fuel and restart the engine with clean "filtered" fuel

CLEAR COVER
See when NOT to change the filter

LIGHTWEIGHT ALUMINUM CONSTRUCTION

DRAIN VALVE
When new, the fuel level in the filter will be very low with minimal restriction. As the filter is used, contaminants collect on the filter from the bottom up. Fuel rises on the filter indicating remaining filter life.

Fuel level increases in clear cover. As contaminants collect on the filter, the fuel rises to a non-contaminated section of the filter, providing optimal filtration while maintaining lowest restriction.

Fuel level at filter wrap level. Even though the fuel level is now more than half of the filter element, the fuel is still flowing through clean media at minimal restriction levels. The filter still has significant life remaining.

The filter element is now completely covered by fuel. At this point, all of the media’s surface area is utilized. Restriction is increasing and the filter element should be changed at the next scheduled maintenance interval.
